Drupal 11 Blog Website - Demo Project

Project Overview

This project is a demo of a blog website built using Drupal 11. The site allows users to view blog posts, explore categories, and access individual blog details. The project is designed to demonstrate the core functionality of Drupal CMS, including content management, custom theming, and module usage.

Features

- **Blog Listing**: Displays a list of all published blog posts.
- **Blog Categories**: Organizes blogs into categories, allowing users to filter by topic.
- **Blog Details Page**: Displays the full content of an individual blog post.
- **User Authentication**: Basic login functionality for site admins to manage content.
- **Custom Theme**: A simple, responsive theme called "Mahi".
- **Custom Content Types**: Blog posts with fields for title, body, category, and author.
- **Responsive Design**: The site is mobile-friendly and adjusts to different screen sizes.

Technology and Versions

- Drupal 11
- PHP version 8.3
- MySQL
- MariaDB version 10.11

Deployment

The project is deployed on GitHub.
Repository link: https://github.com/FarahSadiq/DemoProject

The repo contains the project, along with SQL script for the database. The databse name is "myblogs".

There are two users for the website, one with the role "administrator", and the other one with the role "content editor"

Administrator:
Username: farah
Password: farah

Content Editor:
Username: blogger
Password: blogger

The repository also contains a video demo of the project, highlighting the features included in the website.
